

## Ground Rods and Accessories

Ground Rods

Copper bonded ground rods have a 99.9% pure copper sheath, bonded to a cold drawn carbon steel core. These rods are round assuring maximum rigidity for easy driving and resistance to deformation. Tensile ratings exceed 90k PSI limiting mushrooming when driving in adverse soil conditions and provide a good fit with associated hardware. The uniform layer of permanently bonded copper guarantees and extends life in most soils. Copper bonded ground rods are available in a variety of lengths and diameters to fit most any application. Copper alloy accessories should be used with the copper bonded ground rods to maintain a UL listed installation without compromising quality.

- Available in several designs, lengths and diameters
- Regular (non-threaded) for most standard applications
- Sectional when extra length is required (threaded or non-threaded)
- Pigtail to assure a good electrical contact without the use of clamps applied to the rod
- 10mil standard copper plating thickness (RUS is 13mil)
- Made in the U.S.A.
